

DISPLAY 2000

The basic display device for every production line

The DISPLAY 2000 is a device for the visualization of measuring values – for example of the SIKORA diameter measuring devices of the LASER Series 2000/6000.

The five-digit, digital display is configurable and shows, in combination with the LASER measuring devices, optionally the diameter, x, y of the mean value or the ovality. It can either be directly mounted at the gauge head or installed at any distance and offers a serial interface.

Basic Display Unit

In particular for applications where the measuring systems are connected to a system control via Profibus interface or where a second display is requested, the DISPLAY 2000 is an interesting and excellent low cost supplement. It is suitable for panel mounting as well as for the installation at the gauge head.

Your Benefits

- Digital display, easily visible even from a larger distance
- Selectable monitoring parameter (diameter, ovality)
- Installation at any distance to the gauge head
- Serial interface for the connection to a gauge head

Specifications

5-Digit Display	Digit height of 25 mm The bright, big figures are easy to read even from a distance of 12 m
Interfaces	(Bi-directional serial interface) RS485
Power Supply	100 - 240 V AC \pm 10 %, 50/60 Hz
