

# THE MEASUREABLE DIFFERENCE

# VIEWING THE WORLD FROM A NEW PERSPECTIVE.

In the beginning, we focused on developing reliable measuring systems for industrial production. We now significantly optimize these processes for our customers around the globe. This is our mission. We work meticulously to discover targeted solutions for combatting current challenges. We are need-oriented, results-driven, focused and attentive. Always at eye level with our customers.

With the introduction of non-contact, real-time measurement and its expansion to countless systems and areas of application, we marked a turning point that continues to shape an entire industry. The continuous development of our innovative technologies forms the foundation of our goals. These are pursued in Bremen, Germany. Our subsidiaries across five continents work to fulfill our values: technological innovation and social responsibility; obsess over detail, but without losing sight of the whole; evolving perspectives, but still staying true to ourselves.

We are SIKORA.

CENTERWAVE 6000 – measures pipes during production

## OVERVIEW

# YOUR PRODUCT. OUR SYSTEM.

Our innovative systems are the result of a relationship between your individual requirements and our know-how. Customized solutions are created by a continuous exchange of information and ideas. Over the years, we have expanded and improved our product portfolio. And today, we are your first contact worldwide when it comes to measuring, controlling, inspecting and sorting, in the areas of wire & cable, hose, tube & pipe, plastics, optical fibers and sheets. Whether it is determining product diameter, wall thickness, or an inspection of the raw material, together, we will find the system that best suits you and your products.

# MAKING THE IMPOSSIBLE POSSIBLE.

It sounds like a cliché, but it is our everyday life. We have set standards with our technologies in various manufacturing areas internationally, for 50 years. This makes us the world market leader: known for quality and respected for reliability. Experience shows that innovative, and, above all, researched solutions are the result of intense cooperation. It is the mix of consulting and listening that brings success. This is how we make the impossible possible. Two perspectives, one insight. And a promise to the future of your company.

## CLEAR SIGHTEDNESS

# KEEPING AN EYE ON WHAT REALLY COUNTS.

Developing solutions that are not only customized, but also complex, depending on the requirements, calls for bright minds. To enable our employees to meet daily challenges and opportunities with experience, expertise and enthusiasm, we provide an encouraging environment: inspiring, motivating and appreciative. We create space to develop ideas down to the finest details, and we offer an infrastructure that enables efficient implementation of these ideas. Although this means working under pressure at times, passion and focus drive us.

CLOSE-UP

# KNOWING TODAY WHAT TOMORROW BRINGS.

Our definition of quality control? Looking ahead. With the establishment of contactless real-time measurement, we developed a process that makes complex technological procedures not only more efficient, but also more intuitive. These developments have allowed us to gain essential close insights over the years to what our customers need to be successful. To ensure that companies around the world continue to benefit from this in the future, we invest not only time in developing effective solutions, but also economic resources. And we invest in research – so that we know today what will be necessary tomorrow.

PURITY SCANNER ADVANCED – inspects and sorts pellets for highest material purity

HINDSIGHT

# LOCALLY ROOTED. INTERNATIONALLY NETWORKED.

At our headquarters in Bremen, Germany, the threads of development and research, production and shipping come together. Here we draw on creativity and passion to give our best to you, every day. This is where our roots are, and this is where the visions that continue to shape our industry are born. Together with our subsidiaries and partners, we have the ability to be accessible to all of our customers, at all times.

## FORESIGHT

# SUSTAINABLE, OF COURSE.

We are situated in an industry that consumes a comparatively large amount of material. Every gram has the potential to become a burden on nature. We are aware of this. In order to act as sustainably as possible, for half a century, we have not only been developing solutions that improve production processes and increase profitability of our customers. We want to demonstrate foresight and significantly relieve the environment from our own usage. We take pride in the fact that our measuring and control systems have been proven to conserve resources and continuously reduce emissions. In addition to saving enormous amounts of plastic and crude oil, every year, we can also save up to 5 million tons of carbon dioxide in cooperation with our customers. It is not just our customers who benefit, it is also nature.

## PRUDENCE

---

# LEARNING FROM EACH OTHER – ONE-ON-ONE.

We focus on transparency and prudence. That is why we deliberately opted for an open architecture when planning our company headquarters. Whoever visits us will gain comprehensive insight into our everyday operations; areas of production are as freely visible as parts of our research department. Come experience SIKORA's culture. Or, feel free to come brainstorm with us, and visit our in-house restaurant for exchanging ideas. We are convinced that no product or idea is perfect until every possible perspective has been considered, including yours. Come visit us, one-on-one.

## FARSIGHTEDNESS

# TECHNOLOGY TO PERFECTION.

In our long history, we have learned that there is always room for more improvement. That is why we follow a very specific philosophy: perfection may not exist, but it is worth striving for. We put the highest demands on the quality and efficiency of our solutions. We believe that the potential of an idea is never completely exhausted, or that a proven system cannot be improved. We believe in farsightedness. Our incentive? Your satisfaction; it is the only opinion that matters. This forward thinking allows us to meet future expectations and at the same time to provide important impetus.

VIEW

---

# SHAPING TOGETHER.

Our self-image? Doing better: Projects. Processes. And products. We listen – and understand. That is why our solutions are precise, inclusive and sustainable. We commit ourselves to this promise.
