

## Extrude high-quality product, reduce maintenance costs and increase material savings with SIKORA's equipment training and safety program

Learn best equipment practices to increase line speed and production

Benefits of SIKORA's Operator Training Course Include:

- Understanding the functions of existing line equipment
- **Reduce waste and improve product quality** by properly navigating the processor
- Workplace **accident reduction** with product specific **safety training**
- **Reduce extrusion line downtime** due to improperly handled equipment

Course topics include:

- Processor overview
- How to select product recipes
- Safely use your SIKORA equipment
- Automatic line control
- Data collection and reporting
- Trend reports and online statistics

In addition to the equipment and safety overviews, all classes include customized presentations, hands-on learning, review quiz of covered material and training evaluation.

To ensure the best possible experience, **class sizes are limited** to a maximum of 6 (six) people.
