PURITY SCANNER ADVANCED

Inspection and sorting system for plastic pellets

NEW:
Twin Pack for a throughput of up to 3 tons per hour
The purity of advanced materials, as they are used in medical technology, semiconductor manufacturing, film extrusion, aerospace and automotive industries as well as the production of medium, high and extra-high voltage cables is a decisive characteristic for the quality of the final product. Therefore, in the chain from production, compounding to the processing of injection molded parts, profiles or films, the purity of the plastic granulate is of the utmost priority for the polymer industry.

With the PURITY SCANNER ADVANCED, SIKORA provides an unrivaled, user oriented system for 100% online inspection with automatic sorting of plastic pellets at all process levels.

Unique combination of X-ray and optical technology
The PURITY SCANNER ADVANCED intelligently combines X-ray technology with a flexible optical system. In this combination, the X-ray camera assures the detection of metallic impurities inside the pellet as well as on its surface. Thus, all (e.g. black) pellets are reliably inspected. Discolorations in transparent or on translucent and colored raw materials are reliably identified by a color and/or black and white camera as optical faults. Contaminated pellets are automatically sorted out.

Depending on the application and type of the expected contamination, the client decides if the system will be equipped with X-ray and optical technologies or exclusively with optical technology for material inspection.

More flexibility for all requirements
Interesting is the flexible adaptive camera concept of the PURITY SCANNER ADVANCED. Depending on the type of the expected contamination and application, the system can be equipped with different cameras. The user can adjust the system to his requirements with up to five cameras.

A strong competitive advantage
The PURITY SCANNER ADVANCED is specifically tailored to the requirements of the plastics industry. It ensures a constant material quality, minimizes the risk of possible claims and eliminates returns due to contaminated material, resulting in a strong competitive advantage and a quick amortization.

Your benefits
- Ensures a constant material quality
- Recovers off-spec batches
- Minimizes the risk of claims
- Specifically tailored to the plastics market
- Secures a strong competitive advantage

PURITY SCANNER ADVANCED
Flexible camera options for all requirements.

1. Material feed
2. Transport system
3. X-ray inspection
4.-6. Optical inspection: black and white or color camera (depending on the requirements)
7. Sorting unit
8. Rejected material
9. Clean material
Visualization and analysis
The PURITY SCANNER ADVANCED is combined with a powerful processor system. In the production line, the Professional Data Analysis Management is comfortably operated via the processor system. An additional user interface is not required.

Professional Data Analysis
The Professional Data Analysis Management (PDAM) provides a statistical evaluation of detected contamination during ongoing production, sorted by size and frequency, as well as an image gallery of the pellets that have been detected by the optical cameras as well as the X-ray camera.

All data are automatically saved and available in MS Excel format as well as an image file together with information such as time and batch number.

All features at a glance:
- Image gallery of detected pellets with contamination
- Provision of statistics about size and frequency of detected contamination
- Trend overview for visualizing the chronological sequence
- Selection of size classes
- Automatic data storage

Monitor image of detected faults by the PURITY SCANNER ADVANCED:
- Color variations detected by color camera
- Metallic contamination detected by X-ray camera
- Other optical, visible contamination
- Black specks/yellow discolorations in/on transparent pellets detected by optical cameras

Display of the current trend for statistical evaluation

Size class trend of contaminants detected by optical cameras

Size class trend of contaminants detected by X-ray camera
Innovative transport system
The pellets are fed into the system through a sealed vibration channel. In order to ensure the highest purity, all machine components coming into contact with the product are made of stainless steel or PE, perfectly encapsulated and designed to operate with overpressure.

Integration of the system in the production line
Due to its compact dimensions and low construction height, the PURITY SCANNER ADVANCED is easy to integrate into any new or existing production line. The device is designed for throughputs from a few kilograms up to several tons per hour*.

Cleaning Concept
When designing the PURITY SCANNER ADVANCED, it was of the utmost priority that dust cannot penetrate the device from the outside. However, the device can be opened and cleaned easily.

Perfectly combined: Online inspection and sorting as well as offline inspection and analysis of pellets
For comprehensive inspection and analysis of pellets, SIKORA recommends the combination of the PURITY SCANNER ADVANCED and PURITY CONCEPT Systems. After the PURITY SCANNER ADVANCED has detected and automatically sorted out contamination online, the contaminated pellets as well as the sorted good fraction are analyzed offline by a model of the PURITY CONCEPT Systems (sample testing in laboratory). This perfect interplay of online and offline inspection, sorting and analysis allows for a comprehensive control of the material purity and provides information for avoiding future contamination.

Example:

SIKORA is a manufacturer and global supplier of innovative measuring, control, inspection, analysis and sorting technology for the wire and cable, hose and tube, sheets, metals as well as optical fiber and plastics industries.

The products are exclusively manufactured at the headquarters in Bremen, Germany. With around 300 employees worldwide, 14 international offices and more than 30 regional representatives, SIKORA provides customers with innovative product solutions and individual service. Innovation, product quality and customer satisfaction define the daily activities at SIKORA.
