

# PREVENTIVE MAINTENANCE INSPECTION

## **What is the Preventive Maintenance Inspection (PMI)?**

As part of the Preventive Maintenance Inspection (PMI), we visit your production facility to inspect your SIKORA equipment in its actual production line environment. The PMI offers you real added value, as it supplements existing knowledge of wear and calibration issues with a practical analysis of the equipment in production use.

## **Why is the PMI beneficial?**

With PMI, we take a proactive rather than reactive approach to maintenance. We recommend tailored solutions: from training and calibration to spare parts. This minimizes downtime and maximizes system stability. Our goal is to understand the current situation, identify opportunities, and work with you to define measures that enhance the availability, quality, and efficiency of your SIKORA equipment.

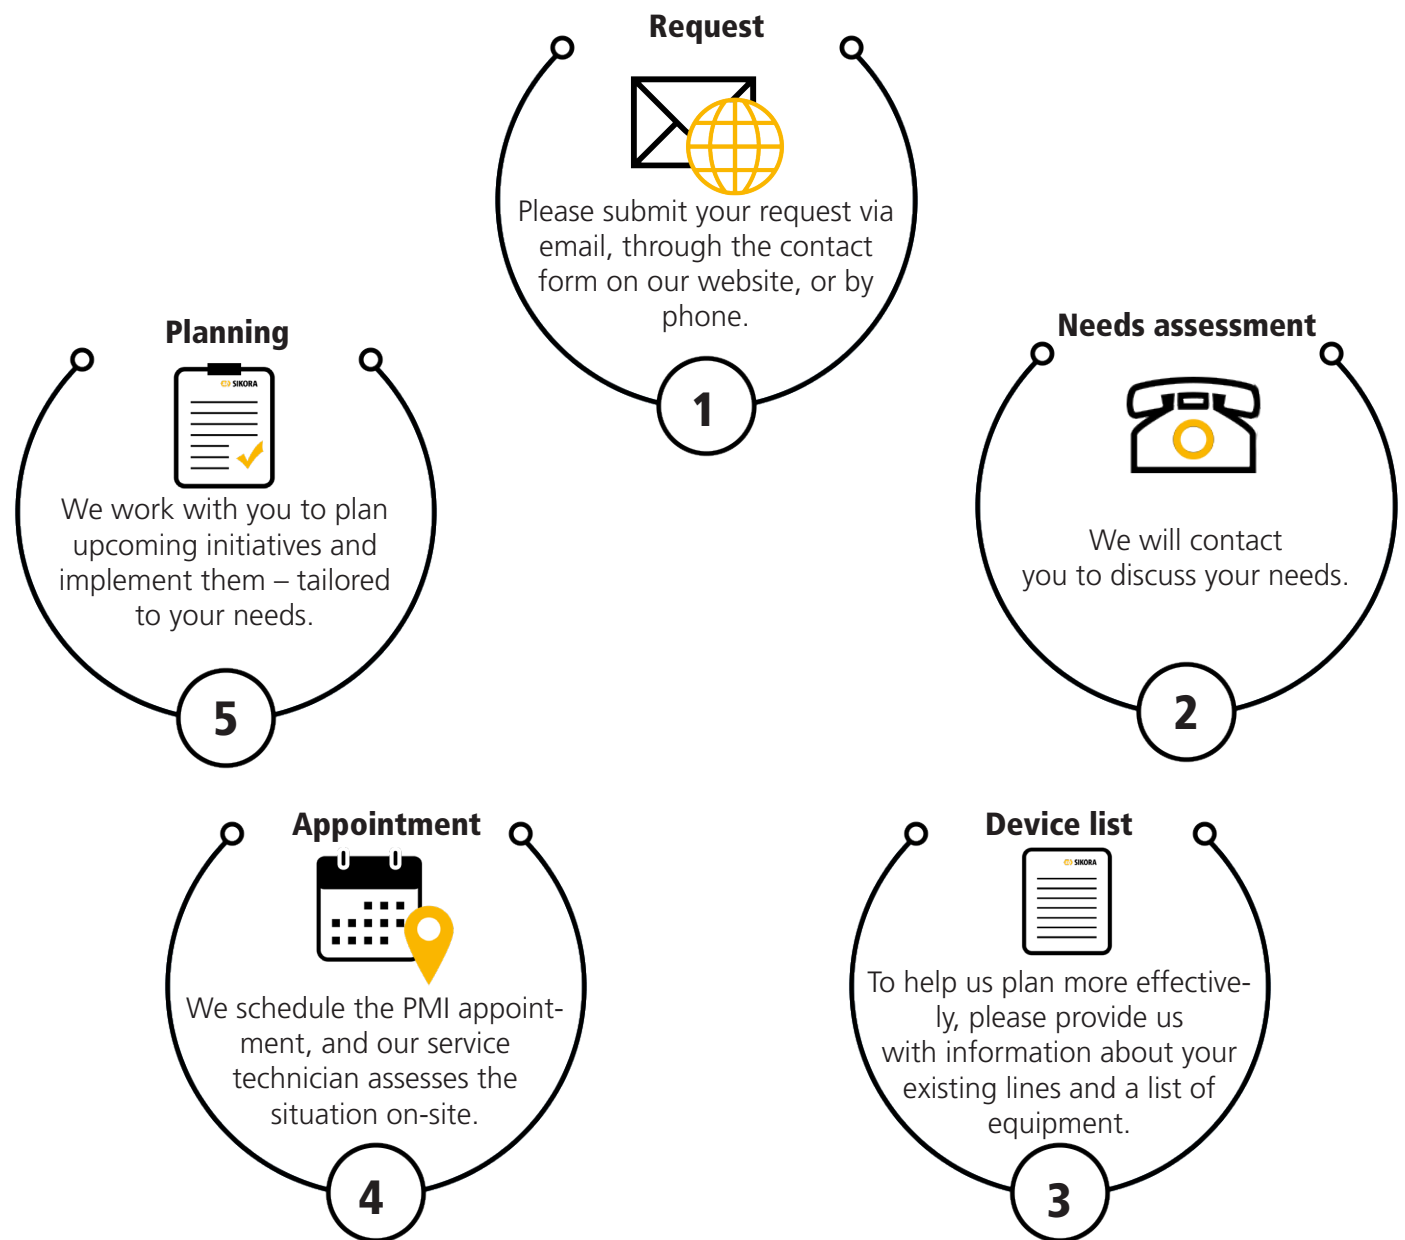

## **Who is the PMI suitable for?**

Our PMI offering is ideal for existing production lines equipped with SIKORA equipment. It is particularly suited to plants with large operator and maintenance teams, as well as a broad or specialized product range. In such plants, knowledge transfer and reproducible, audit-proof processes are crucial. PMI is also recommended in cases of unclear service history, growing optimization needs, or increased safety requirements, to seize opportunities early and ensure reliable, trouble-free operation.

## **Your benefits at a glance:**

- Clear status report on your SIKORA equipment
- Increased system availability and measurement stability
- Reduced rates of missing parts and rework
- Faster fault diagnosis by trained teams
- Customized action and investment plan
- Scheduled downtime instead of unexpected, sudden breakdowns
- Longer service life through targeted equipment upgrades and spare parts deliveries
